Department for Education Funded Strategic EdTech Support from Experienced Schools

During 2020/21 the EdTech Demonstrator Programme helped schools up and down the country to enhance their remote learning strategies. Covid-19 is still having an extraordinary impact on education but over the last 12 months teachers have kept learning going and have rapidly adapted their skills to do their best for all students in their care. This rapid professional development creates huge opportunities to ensure the legacy of Covid-19 is one of technology becoming a curriculum entitlement for all students to help progress teaching and learning.

The all new EdTech Demonstrator Programme consists of 3 levels of potential support:

LEVEL 01

Support for remote education, catch-up and recovery provision.

LEVEL 02

Analysis of current EdTech practices to seek 1 or 2 areas where use of technology could be further enhanced to ensure maximum impact for staff and pupils.

LEVEL 03

Development of a sustained digital strategy where technology is embedded, especially digital platforms and devices, as part of a wider change programme, recognising where technology will and will not make an impact.

Further information about each level of the Programme can be found by following the links above.

We firmly believe that technology, when utilised appropriately, can play a huge role in assisting teachers to improve pupil progress. Our goal is to create a network of like-minded schools sharing good practice to maximise modern innovations in EdTech.

Skipton Girls' High School is part of Northern Star Academies Trust. Our trust's schools provide education to children from 3-18. Further to this we have supported hundreds of schools during Covid-19 with their remote teaching provision. We have also operated a 1:1 laptop scheme for over 10 years and technology has played a key role in our curriculum throughout this time. We can use our range of resources and mountains of experience to assist you in developing your own bespoke EdTech strategies.
